This preliminary map series shows land use in the nine-county San Francisco Bay Region at the time of the 1970 Census. It is derived primarily by interpretation of high altitude color infrared photography, but a limited field check has also been made. Sensor data and census data are being correlated, and changes in land use between 1970 and 1972 are being compiled. The latter will also serve to evaluate imagery from satellite sensors. Results may be made available at half the present scale and sheet-size to facilitate joint use of the maps with computer tabulations, and to facilitate use with other maps at 1:125,000 emanating from the San Francisco Bay Regional Environment and Resources Planning Study, a joint effort by USGS and the U.S. Department of Housing and Urban Development. Inquiries and suggestions may be addressed to the Director, U.S. Geological Survey, Washington, D.C. 20244.

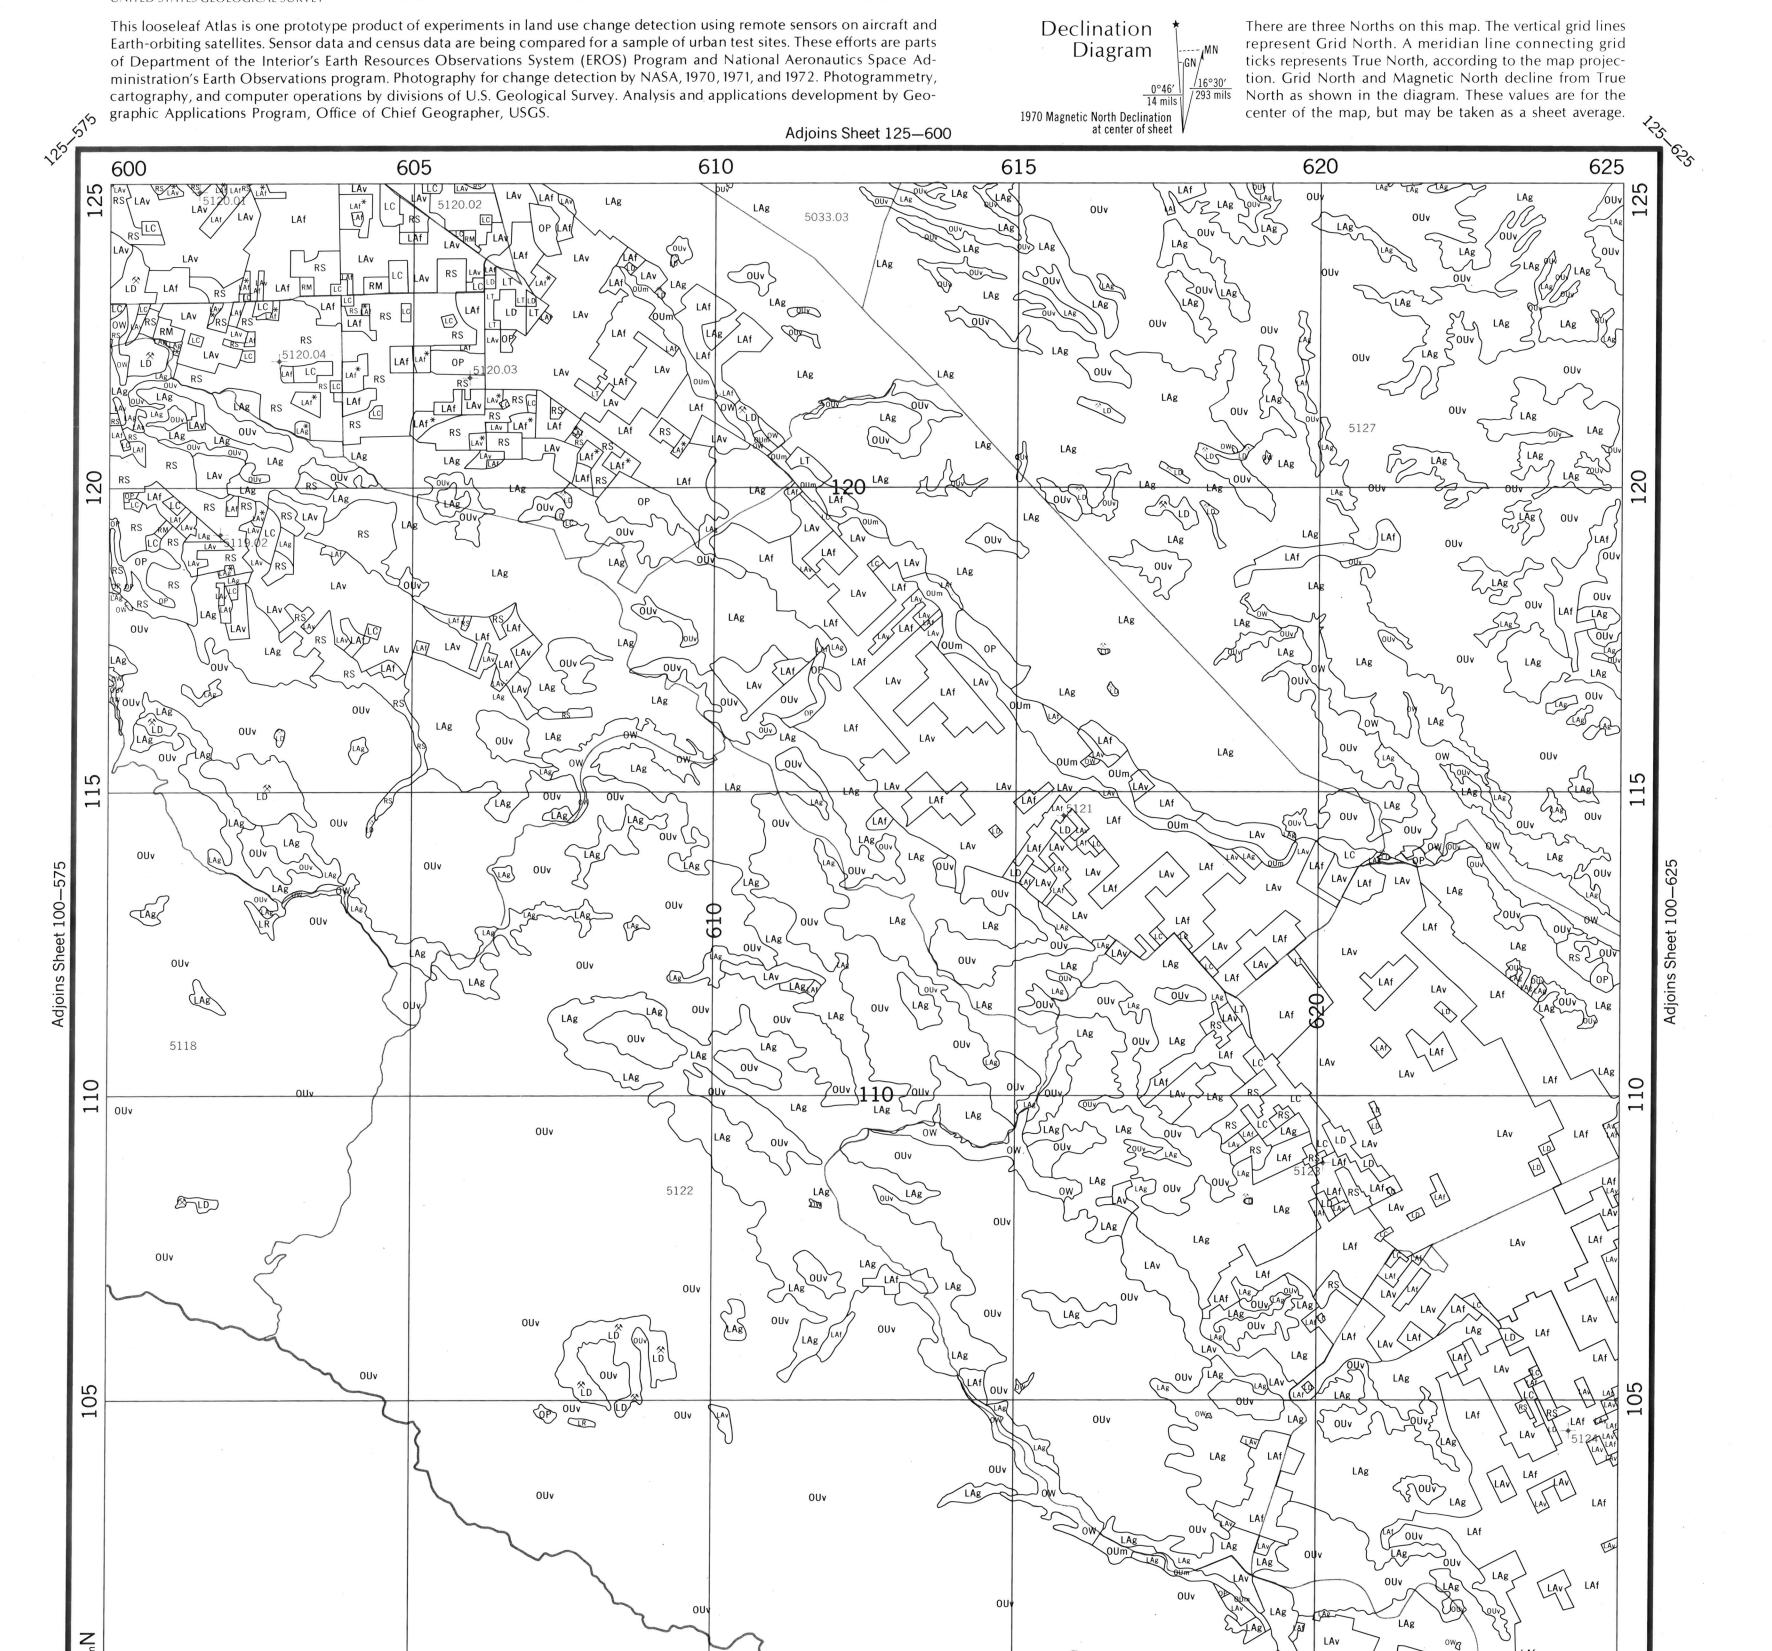

vvaler....

Land use in transition shown: *. The letter codes are for one classification scheme being tested for urban land use mapping at this scale using high altitude aerial photography. The numerical codes are corresponding designations proposed for possible nation-wide applications. See USGS, Geological Survey Circular 671.

Thousands of Feet Statute Miles

600_{km}E UTM Grid Zone 10 605

The geographic coordinate system at five-minute interval is based on a conformal projection centered on the area mapped. Universal Transverse Mercator (UTM) coordinate system is shown with grid interval of five kilometers. This grid forms the basis for sheetlines, sheet numbering, and location control for computer mapping. The map is based on an orthophoto mosaic made from high altitude aircraft photography acquired by U.S. Geological Survey, May 1970. Mosaic, projection and control
